

PART A – MULTIPLE CHOICE QUESTIONS (20 Questions)-(SEPT-28 -2026)

1. What is a Linux Filesystem?

- A. Database
- B. Structure used to organize files and directories**
- C. Programming Language
- D. Web Browser

2. Which symbol represents the Linux Root Directory?

- A. ~
- B. ..
- C. /**
- D. .

3. Which directory usually stores user files?

- A. /etc
- B. /home**
- C. /bin
- D. /tmp

4. Which directory contains configuration files?

- A. /var
- B. /usr
- C. /etc**
- D. /home

5. What does the clear command do?

- A. Delete files
- B. Clear terminal screen**
- C. Create directory
- D. Exit terminal

6. What is the purpose of sudo?

- A. Change directory
- B. Execute command with administrator privileges**
- C. Show user
- D. Show hostname

7. What does pwd stand for?

- A. Print Working Data
- B. Present Working Directory**
- C. Personal Work Directory
- D. Path Working Directory

8. Which command lists files and folders?

- A. cd
- B. pwd
- C. ls**
- D. rm

9. Which command shows hidden files?

- A. ls -l
- B. ls -a**
- C. ls -R
- D. pwd

10. Which command shows detailed file information?

- A. ls -l**
- B. ls -a
- C. ls
- D. pwd

11. What does ls -la display?

- A. Files only
- B. Hidden files only
- C. Detailed list including hidden files**
- D. Directories only

12. Which command changes directory?

- A. ls
- B. pwd
- C. cd**
- D. mkdir

13. What does cd .. do?

- A. Go home
- B. Go to root
- C. Move to parent directory**
- D. Delete directory

14. What does `cd ~` do?

- A. Go root
- B. Go parent directory
- C. Go home directory**
- D. Exit terminal

15. Which path is an absolute path?

- A. Documents
- B. Desktop
- C. Downloads
- D. `/home/ubuntu/Documents`**

16. Which command creates a directory?

- A. touch
- B. `mkdir`**
- C. rm
- D. pwd

17. Which option creates parent directories automatically?

- A. `mkdir -r`
- B. `mkdir -f`
- C. `mkdir -p`**
- D. `mkdir -a`

18. What does `ls -R` do?

- A. Remove files
- B. Show hidden files
- C. Recursive listing**
- D. Rename files

19. Which command removes an empty directory?

- A. rm
- B. `rmdir`**
- C. pwd
- D. ls

20. Which command removes a directory and its contents?

- A. `rm -r`**
- B. `rmdir`
- C. `mkdir`
- D. ls

PART B

1. Define Linux Filesystem.

A **Linux Filesystem** is a structure used to organize and manage files and directories in a Linux operating system.

2. Explain the Root Directory (/).

The **Root Directory (/)** is the top-level directory in Linux. All files, directories, and other folders are organized under /.

3. What is the purpose of /home?

The /home directory stores the personal files and folders of regular users.

4. What is the purpose of /etc?

The /etc directory contains system and application **configuration files**.

5. Explain the clear command.

The clear command clears the contents displayed on the terminal screen. It does not delete files or commands.

6. What is sudo and why is it used?

sudo allows a user to execute commands with **administrator (root) privileges**. It is used when a command requires higher permissions.

7. Explain the pwd command.

The pwd command stands for **Print Working Directory**. It displays the full path of the directory you are currently working in.

8. Differentiate between ls and ls -la.

- ls – Lists files and directories in the current directory.
- ls -la – Shows a detailed list of **all files and directories, including hidden files**.

9. Explain cd .., cd ~ and cd /.

- cd .. – Moves to the **parent directory**.
- cd ~ – Moves to the user's **home directory**.
- cd / – Moves to the **root directory**.

10. What is an Absolute Path?

An **Absolute Path** is the complete path of a file or directory starting from the **root directory (/)**.

Example: /home/ubuntu/Documents

11. What is a Relative Path?

A **Relative Path** specifies the location of a file or directory **relative to the current working directory**.

Example: Documents/file.txt

12. Explain the purpose of mkdir -p.

The mkdir -p command creates a directory along with any required **parent directories** that do not already exist.

Example: mkdir -p Linux/DevOps/Notes

13. Explain the purpose of ls -R.

The ls -R command displays files and directories **recursively**, including the contents of subdirectories.

14. Differentiate between rmdir and rm -r.

- rmdir – Removes **empty directories only**.
- rm -r – Removes a directory **and all its contents recursively**.

15. Why is rm -rf considered dangerous?

rm -rf forcefully and recursively deletes files and directories **without asking for confirmation**. If used on the wrong path, it can delete important system or personal files and may cause serious data loss.
