

DAY-1 MACHINE TEST – LINUX BASICS

Module: Linux Fundamentals – Day 1

Topics: Linux Introduction, Ubuntu, WSL, pwd, ls, whoami, hostname, date, uname -a, mkdir

1. What is Linux?

- A. Database Management System
- B. Operating System Kernel**
- C. Programming Language
- D. Web Browser

2. Ubuntu is:

- A. Web Server
- B. Programming Language
- C. Linux Distribution**
- D. Database

3. What does WSL stand for?

- A. Windows Service Loader
- B. Web System Linux
- C. Windows Subsystem for Linux**
- D. Windows Software Layer

4. Linux is mainly used for:

- A. Gaming Only
- B. Servers and Development**
- C. Video Editing Only
- D. Graphic Designing

5. Which company developed WSL?

- A. Google
- B. Apple
- C. Microsoft**
- D. Oracle

6. Which command displays the current working directory?

- A. ls
- B. pwd**
- C. whoami
- D. Mkdir

7. Which command lists files and folders?

- A. pwd
- B. hostname
- C. ls**
- D. Date

8. Which command displays the current logged-in user?

- A. hostname
- B. pwd
- C. whoami**

D. Mkdir

9. Which command shows the system hostname?

A. hostname

B. whoami

C. pwd

D. Ls

10. Which command displays the current date and time?

A. time

B. clock

C. date

D. Cal

11. Which command displays Linux system information?

A. pwd

B. ls

C. uname -a

D. Hostname

12. Which command creates a new directory?

A. touch

B. mkdir

C. ls

D. Pwd

13. What is the purpose of pwd?

A. Create Folder

B. Show Current Directory

C. Delete Folder

D. Show User

14. What is the purpose of ls?

A. List Files and Directories

B. Show User

C. Create Directory

D. Display Date

15. What is the purpose of whoami?

A. Show System Name

B. Show Current User

C. Show Date

D. Show Directory

16. What is the purpose of hostname?

A. Show Current User

B. Show System Name

C. Create Directory

D. Show Date

17. What is Ubuntu?

- A. Linux Distribution
- B. Text Editor
- C. Browser
- D. Programming Language

18. Ubuntu is installed on Windows through:

- A. Git
- B. Docker
- C. WSL
- D. Kubernetes

19. Which command would you use to verify Linux kernel information?

- A. pwd
- B. ls
- C. uname -a
- D. Mkdir

20. Which command is used to create multiple directories?

- A. pwd
- B. whoami
- C. mkdir
- D. Hostname

PART B

1. Define Linux.

Linux is an free open source Operating System gives a medium for communicating user to the computer hardware

2. What are the advantages of Linux?

The main advantages of Linux are:

- It is open-source and free to use.
- It is secure and reliable.
- It is highly customizable.
- It performs well even on low-resource systems.
- It is widely used for servers and cloud environments.

3. Why is Linux widely used in DevOps?

because most servers and cloud environments run on Linux. It provides powerful command-line tools, scripting capabilities, automation support, security, and easy integration with DevOps tools such as Git, Docker, Jenkins, and Kubernetes.

4.Explain the difference between Linux and Ubuntu.

Linux is an operating system kernel that provides the core functionality required for an operating system.

Ubuntu is a Linux distribution built using the Linux kernel. It includes the Linux kernel along with system tools, libraries, applications, and a package manager.

5.What is a Linux Distribution?

A Linux distribution, or Linux distro, is a complete operating system built around the Linux kernel. It includes the kernel, system utilities, libraries, package managers, and other software

6.What is Ubuntu?

Ubuntu is a popular open-source Linux distribution.Ubuntu is widely used for desktop computers, servers, cloud platforms, development, and DevOps.

7.What is WSL?

WSL stands for Windows Subsystem for Linux.

It is a feature of Windows that allows users to run a Linux environment directly on Windows without needing to install Linux as a separate operating system or use a traditional dual-boot setup.

8.Explain the relationship between Windows, WSL, and Ubuntu.

- Windows is the main operating system running on the computer.
- WSL is a Windows feature that provides an environment for running Linux.
- Ubuntu is a Linux distribution that can be installed and run inside WSL.

So the relationship is:

Windows → WSL → Ubuntu

9.Why do Windows users install Ubuntu through WSL?

Windows users install Ubuntu through WSL to use Linux tools and commands while continuing to use Windows as their main operating system.

10.Explain how WSL helps developers.

WSL allows developers to use a Linux environment directly from Windows. Developers can use Linux commands, Bash, package managers, development tools, Git, Docker-related workflows, and scripting tools without switching to a separate Linux computer.

This makes it easier to develop and test applications in a Linux-like environment.

11. Explain the purpose of the pwd command.

Pwd =present working directory

It displays the full path of the directory in which you are currently working.Explain the purpose of the ls command.

12. Explain the purpose of the ls command.

It displays the files and folders available in the current location.

13.Explain the purpose of the whoami command.

The whoami command displays the username of the currently logged-in user.

14.Explain the purpose of the hostname command.

The hostname command displays the name of the computer or system on which you are currently working.

15. Explain the purpose of the date, uname -a, and mkdir commands.

- **The date command displays the current system date and time.**
- **The uname -a command displays detailed information about the Linux system and kernel.**
- **mkdir stands for Make Directory.It is used to create a new directory (folder).**
